Features :

This power supply has **Inbuilt Inverter** with AVR, short circuit protection, over load, over voltage & fuse, all protections are with buzzer & LED indicators, even after power failure, the output remains continue. Rottery switch to select the output voltage, power on-off switch, RF connector.

In older system, we are using **AVR+INVERTER+POWER SUPPLY**. So we are using three equipments to drive a cable TV line, every equipment has a transformer inside, if every unit is of good quality, then it will give 80% efficiency so each unit is wasting 20% of electricity, which means $20\% \times 3 = 60\%$ wasting of electricity. In this new unit we have used only 1 transformer, so wastage is very less.

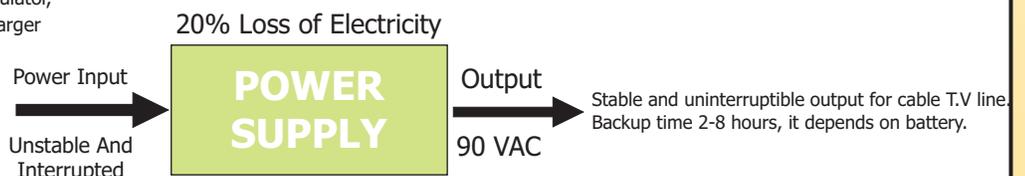

It Is An Old System With Low Efficiency & HI Electricity Bill

This new system has inbuilt automatic voltage regulator, inverter (UPS), cable T.V power supply, battery charger for all function using only one transformer.

Technical features :

- Inbuilt battery charger with boost buck charging
- Battery low cut-off
- Battery reverse protection
- Over load protection
- Short circuit protection
- AVR
- All functions with LED indications & buzzer.
- All functions are auto reset.

New System With HI- Efficiency And Low Electricity Bill
